

Specification

Aluminum Fume Hood

The Aluminum Fume Hood is constructed of spun aluminum with an internal mouth opening of 12.72 inches in diameter and the outer diameter is 15 inches. The lip of the hood is rolled so as to be functional as a handle to permit easy mobility. The hood is fitted with an aluminum damper that is easily adjustable from the outside of the hood. The circular upper opening of the hood is readily adaptable to 160mm diameter flexible hose or hard ducting. The entire hood is protected with a baked enamel finish inside and out.
