

## Case Story

---

### Problem:

The National Museum of Wales contacted Nederman regarding their Botany Department. The botanists prepare and treat plant life for analysis using a variety of chemicals. Some of these chemicals are harmful to inhale and the Museum required some type of extraction unit. The needed to be compact yet powerful.

### Solution:

Nederman provided the Botany Department with an EK 3000 equipped with an air gas filter. The small unit is chemical resistant and works in the small environment per their request. The result is a chemical fume free workspace.
