

## Case Story

### Problem:

Keebler Food Company with headquarters in Elmhurst, Illinois, is the second largest cookie and cracker manufacturer in the United States. They pride themselves in product consistency and quality, cost control, and efficient use of their facilities. One of their many facilities located in Grand Rapids, Michigan needed help keeping their facility clean and sanitary so they can continue to produce the “uncommonly good” cookies they’re known for.

### Solution:

Nederman installed 1 High Vacuum System station consisting of the following equipment:

- (1) E-Pak 300
- (1) Barrel Top Separator
- (1) Service Hour Meter
- (8) CE 370 Cleaning Set with Microswitch activated inlet valves

### Result:

The performance and reliability necessary to maintain a clean working environment for their food products and employees. Cleaning equipment was made convenient for employees and easy to use. The vacuum turned on automatically whenever a tool was lifted from the hanger.
