## Extention Arm

The Nederman Extension Arm is comprised of a 7' long outer arm and a 7'3" long inner arm. Each section is manufactured from heavy gauge steel sections with black powder-coat enamel finish. The center joint is capable of rotating horizontally 310 degrees. The inner arm is fastened to a pivoting wall bracket to allow 180 degrees of rotation. It is fitted with 8-inch diameter flame retardant fiberglass hose, PVC laminated inside and out. The robust arm contains replaceable friction disks at the joints with dual bearings. The Extension Arm comes pre-adjusted and pre-greased from the factory.

It includes a Nederman Original arm mounting bracket and a Nederman 5000 Series Fume arm-mounting bracket. The Extension arm can be used in conjunction with all Nederman Original and 5000 series extractor arms. The Extension Arm will allow 360-degree rotation of the fume extractor arm.
