

Features & Benefits

Extractor Kits

The **Extractor Kit** range is a combination of products all individually available in the Nederman Bench Top product line. The product line consists of six different Extractor Kits for capture and filtration of harmful fumes and gases for up to three simultaneous users.

Here, There, Everywhere

The small size and smooth design of the Extractor Kits make them easy to set up in any working environment and they can all be used for many different applications. These Extractor Kits are now all available in ESD Safe units for the demands upon the electronics industry for static control. For chemical and solvent filtration and all-carbon refillable filter is now available as an accessory.

Filtration

The polluted air is filtered in three steps, particle, gas and micro filtration (HEPA) and then re-circulated back into the room. The filter is easily changed without tools and change is made dust free.

Technical Descriptions

The Extractor Kits are presented in an 8-page folder, but single technical descriptions showing each one of the kits are also available. Further information regarding the different components can be found in the CX 5500, System 32, FX-arms, Mini Extractor Arm and EK 2000 brochures.
