

Case Story

Problem:

Vecho Manufacturing produces non-explosive pigments. This facility has several mixing vats. Each vat is manually filled with dust pigments throughout the day. Each time the vat is filled, dust fills the facility and coats the floors, equipment and employees. Vecho contacted Nederman for a solution to their dust problem.

Solution:

Nederman provided Vecho with 4 FilterMax dust collection units. Two 3000 series and two 6000 series units with fans were installed at the facility. The dust is captured by 12 Nederman Original Arms. In addition vecho purchased a Portable FilterBox when an extra unit was required. Vecho was so pleased with the installation, we are currently discussing the installation on a VAC 20-1500 High Vacuum Unit.
