

Case Story

Problem:

A large bakery located near Bologna has serious problems with flour dust generated by a dough mixing process. This dust is causing serious health problems among bakery employees.

Solution:

A Nederman (6) foot NEX D arm located near the dough mixer, captures the irritating dust before it can be inhaled by the operator. The captured dust is then filtered through a wall mounted Filterbox before discharging into the atmosphere. The air quality has been significantly improved, as can be seen in this photo. The customer is very satisfied with this turn-key installation.
