

## Case Story

---

### Problem:

Nestle food manufacturing facility in Sweden, prepares a variety of frozen food products. In the production process powder dust from spices are mixed and prepared in large bins. The spices need to be weighed and measured and mixed at several stations. During the weighting process, the dust from the spices are not contained and therefore, irritating the personnel who handle them. These concentrated spices are irritating to the nose and lungs.

### Solution:

Nederman installed a FilterBox with an Original fume extractor arm with an extension hood to completely cover the measuring zone. Now the personnel can work without any dust problems. Both the person weighing and those nearby are very pleased with the result.
