

Case Story

Problem:

Dyalcos is a company that produces foodstuffs on behalf of a third party. During the process several dry ingredients are mixed in bins. During this process the spreading of dust was becoming a nuisance and irritation to employees. They have an existing extraction system which consisted simply of a flexible hose connected to a fan. Polluted air was exhausted into the atmosphere. Dyalcos contacted Nederman for a more efficient solution to their dust problems.

Solution:

Nederman installed a Filterbox on a cart equipped with an N29 fan and an Original extraction arm. The mobile system could be used anywhere in the mixing area and resolved their dust pollution problem effectively. Dyalcos is really satisfied with the flexibility of their new dust extraction system.
