

Case Story

Problem:

Hellenis Aerospace Industry manufactures parachutes. During the handling, cutting and sewing of special textile fabrics, harmful and irritating particles are generated. These particles were creating a dusty facility and harming the employees. Hellenic contacted Nederman to solve their dust problem.

Solution:

Four Nederman Original Arms were installed, one at every sewing machine table and one arm on a rail that travels above the cutting table of the workshop. The arms are connected to a system of two Filterboxes, which efficiently are filtering the particles from the captured air. The customer is very pleased with the efficiency of the installation that has eliminated the harmful particles and improved the workplace.
