## Nederman, present at the Athens 2004 Olympics I - Personal protection important even for mannequins

**Situation:** At the workshop making the costumes, structures and other equipment for the opening and closing ceremonies of the Athens 2004 Olympics (Jack Morton Public Events SA) solvent fumes were generated during the various procedures. In order to protect the employees from the pollutants the management started looking for a portable device to capture and filter the pollutants.

**Solution:** Initially a Gas –Micro FilterCart was purchased, and after a few months of excellent performance as stated by the employees, a new **FilterCart Carbon** unit was purchased to handle the additional workplaces where solvents and glues were extensively used.

**Benefits:** The compact design, its maneuverability in the workshop premises, the convenient connection to a simple socket and its excellent performance during a demonstration of the unit at our premises persuaded the managers to proceed with the purchase.
