

Case Story

Ser. 884 for goods protection at GORENJE, Slovenia

Situation: Gorenje in Velenje, Slovenia, is one of the world leaders in domestic appliances such as refrigerators, washing machines, dish washers, etc. At the beginning of this year the company built a new warehouse from which products are delivered all around Europe with trucks and railway coaches.

When the pallets are loaded in the transporting vehicle there will always be a space between the pallets. In order to protect the products, special bags are placed in all free spaces and are then filled with air.

Solution: We have delivered Nederman products to Gorenje at several occasions in the past. A few months ago we started discussions with the head technologist at the company, Mr. Pecnik Franc. We decided to install 13 hose reels ser. 884 with 20 m of hose, Ø12.5 mm. These cover the need of compressed air at all loading places in the warehouse.

Benefits: The air filling system works better than good and the customer is very satisfied.
