

Case Story

Emission from GSV* — vehicles at the airport in Surcin, Belgrade - SCG

Situation: During the daily warm-up procedures of these heavy duty vehicles, the amount of emission was recognized as a health hazard.

Solution: As these vehicles are equipped with exhaust pipe on both sides, our dealer DAT Inzenjering in Belgrade solved the problem with one exhaust hose reel package (ser.865 + N24 fan) on each side of the vehicle(s).

Benefits: The systems work very well, the staff are happy and one more garage has been equipped in the same way.

* Ground Service Vehicles (GSV s) are very common at airports world wide, and there must be endless applications still to be solved.
