

CASE STORY

New Fire and Emergency Centre equipped with Nederman products

The Fire Brigade in Frankfurt, Germany, has established a new Fire and Emergency Centre in the middle of the city (population 600.000). The opening ceremony took place on August 29th, 2003. Nederman was invited to the occasion, being the supplier of all exhaust and welding fume extractors.

Nederman equipment in Frankfurt Fire and Emergency Centre

Nederman GmbH won this €200.000 order after a tough battle with Plymovent, Fischer, and other companies. The customer is satisfied with the entire installation. Many visitors from fire fighting authorities across Germany, as well as from other European and overseas countries, will in the near future come to visit this exemplary and modern European Fire and Emergency Centre.

Nederman will of course use the installation as a reference. Nederman GmbH has planned to invite all German district fire chiefs – approx. 400 of them – to a seminar in Frankfurt, and to have a look at the impressive installation. A permission to do so has already been given by the management of the Fire and Emergency Centre.
