

## Welding application in Portugal

### Situation:

Tridex a Dutch company producing components for trucks, was building a new plant in Portugal. They now wanted to get rid of the fumes from the heavy welding.

### Solution:

We installed 10 Nederman Original arms – with automatic dampers operated by sensor or switch on the hood. One FilterMax 6000 with fan NCF 80/25, 11kW controlled by Fan Inverter. The possibility to expand the installation with six more arm and the energy saving Fan Inverter were strong arguments for this sale.
